## Work in progress

- Seeing Like a Breeder: Animal Breeding and Eugenic Sterilization
  (with Elliott Ash and Hans-Joachim Voth)
  We study how analogies shape the policies a society is willing to adopt, using the case of eugenic sterilization in the US during the first half of the twentieth century. Eugenics sought to improve the genetic quality of the population through selective breeding, and its advocates promoted the cause by analogy to the selective breeding of livestock. We combine roll-call votes on state sterilization bills with county-level measures of selective breeding. State representatives from counties with higher Merino shares were more likely to vote for sterilization laws. The relationship holds when we instrument the Merino share with the Merino suitability index. Local newspapers show the same pattern: counties whose papers published more on animal breeding also published more on eugenics.
- History LLM: Time Travel with AI
